

What's New

Changes in version 5.4.6

Office management system by Auditdata.

Version 5.4.6 released for Denmark, Norway, Sweden, Finland, Ireland and the UK.

What's New

Client

Client information

- The internal process of creating temporary hospital numbers has been improved to reduce the risk of duplicate instances where this process is used for all patients

Hearing instrument related

Invoice

- The invoice receipt ID has been increased in length to 36 characters

Other features

Attention list

- The Attention List entries on all tabs are now filtered on the patients assigned to the Location selected, allowing users in multi-Location sites to focus on the patients in specific Locations

Performance

Performance improvements and options

- Internal record ID generation and transaction handling in various areas of AuditBase has been improved to reduce the risk of timeouts and lock errors

Scheduling

Referral Overview

- The Referral Overview is now filtered on the patients assigned to the Location selected allowing users in multi-Location sites to focus on the Referrals relevant to specific Locations
