Changes in version 6.0.2

Auditdata

Clinical records

Auto Journal Events

- More information can now be put into Auto Journal Events using new variables and new Events
- Existing Earmould events are extended with Impression and Sent to Manufacturer date variables
- Existing Repair Task events are transformed to variable based events with multiple variables describing task type, task details, attached device and dates
- A new event of Repair Task Completed has been added
- Existing Stock events are transformed into variable based events with multiple variables describing manufacturer, article, serial number and ear side
- Existing Audiogram events are updated with multiple variables describing the mean values, audiogram type, date and speech tab results
- A new Audiogram event of Audiogram Signed has been added
- The new HIMSA Noah Alerts Dashboard is implemented allowing Hearing aid users to communicate into their Noah record in Auditbase via their mobile app where Noah Mobile is enabled
- We have restricted the standard Noah Alerts Dashboard to support existing patient protections in Auditbase by excluding Alerts depending on the user's Locations and rights
